Freighters to the Rescue!

Freight in the Seats!

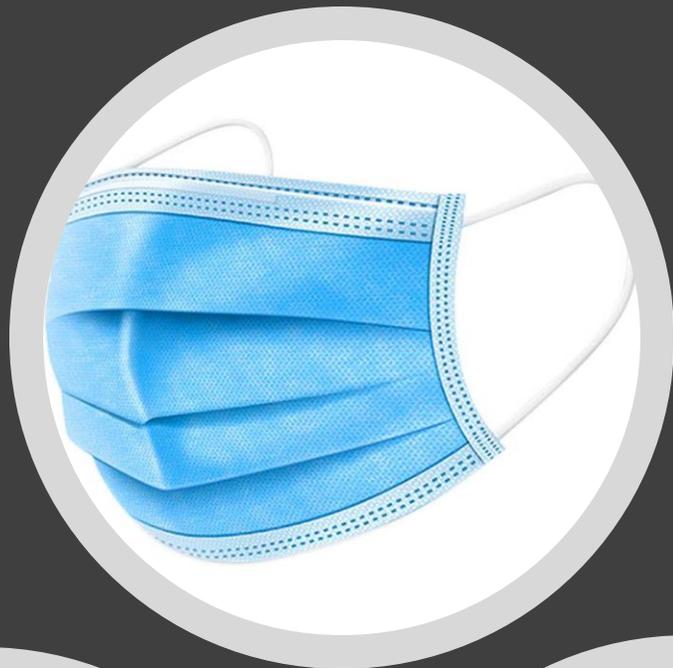

Mission of the Century

Vaccine Challenges

- Stakeholder collaboration is essential
- IATA says that 15 million deliveries will require 8,000 dedicated 747 freighters
- Each vaccine has different levels of temperature sensitivity, with some ultra-cold versions requiring storage at minus 80 degrees Celsius (-112 Fahrenheit).
- Dangerous-goods regulations strictly limit how much dry ice — essentially, solid carbon dioxide — can be carried on airplanes because it turns to vapor as it warms.
- Cybercrime protection: refrigerated warehousing data networks

It's Not Just About the Vaccine

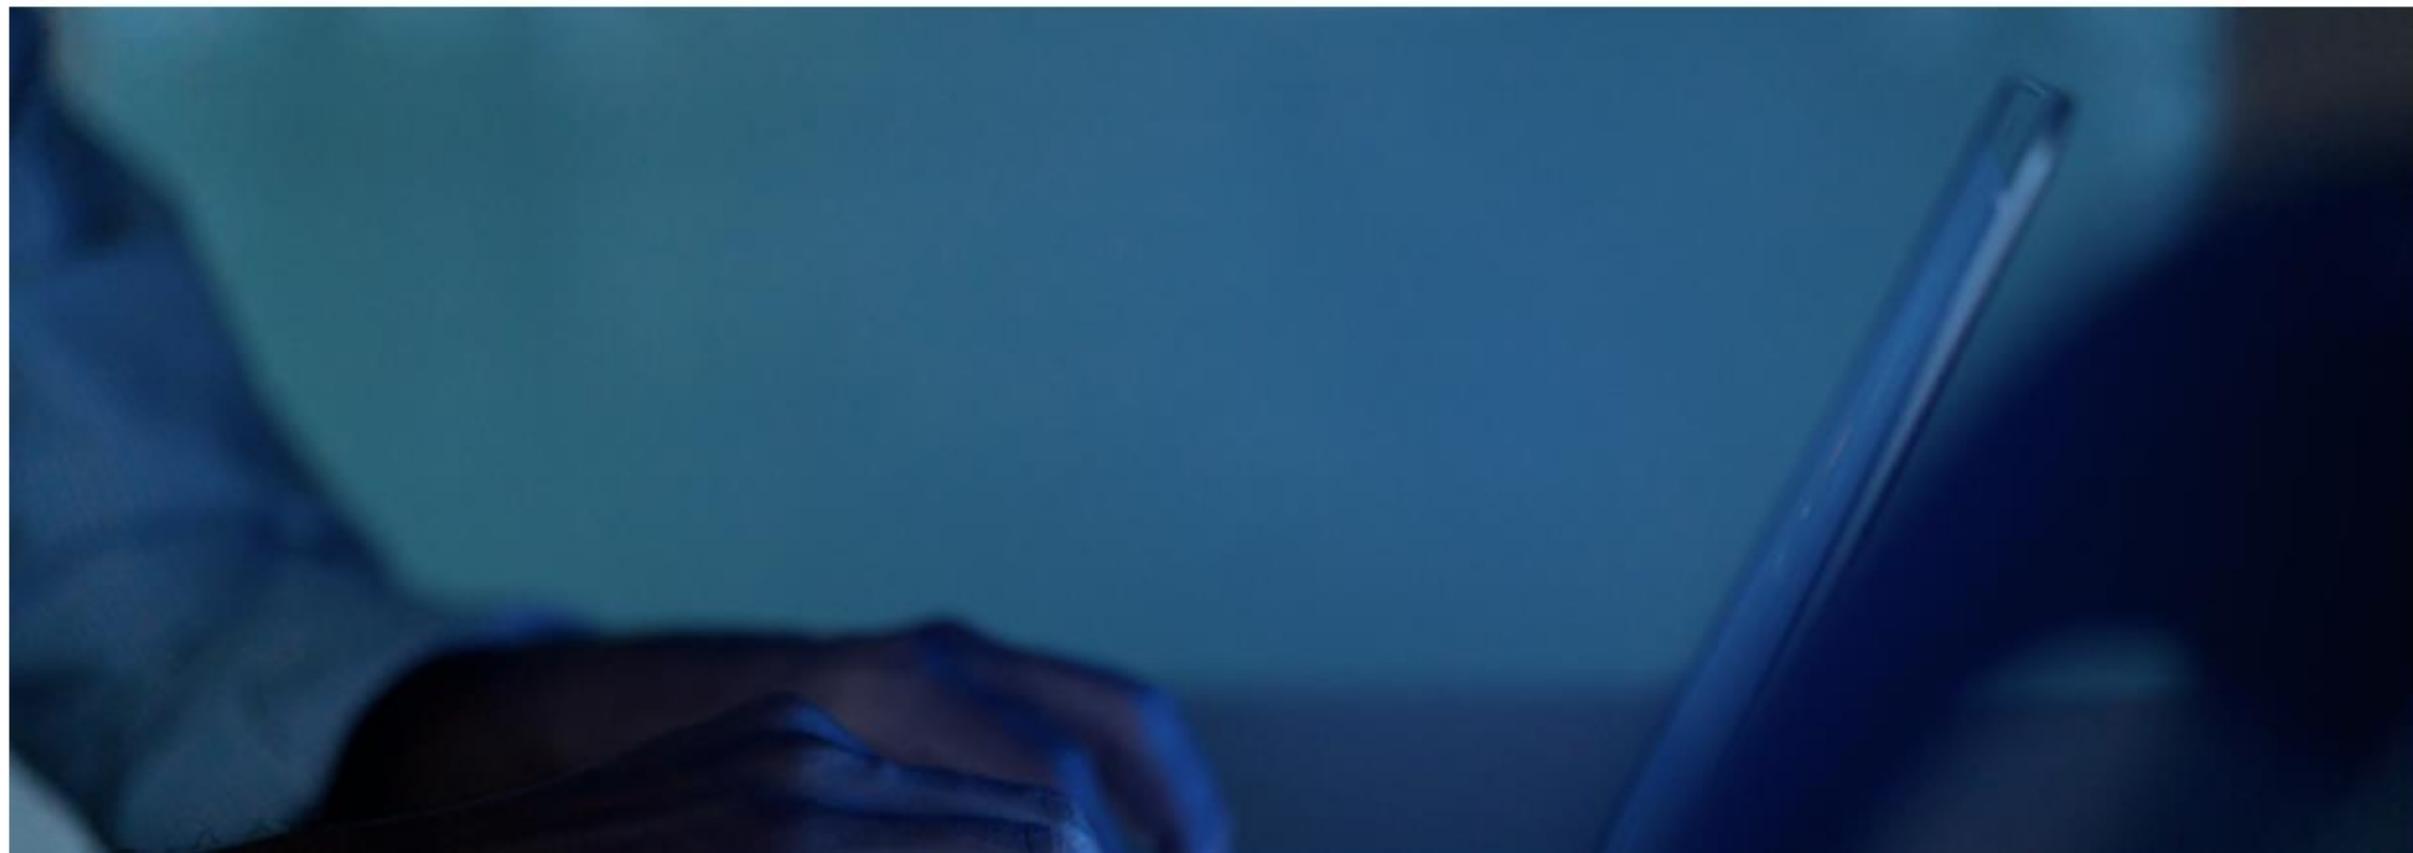

A close-up photograph of a computer keyboard. The central focus is a light blue key with the words "Cyber crime" printed in a bold, black, sans-serif font. The key is slightly raised and has a soft shadow. Surrounding it are several dark grey keys with white symbols: an equals sign, a left arrow, a right arrow, a bracket, a curly brace, a double quote, a dash/underscore, a number 2, and a Shift key with a house icon. The lighting is dramatic, highlighting the texture of the keys and the blue color of the central key.

**Cyber
crime**
